Strategies
International**

Company Overview

Data Strategies Int'l is a leading provider of large-scale data migration and conversion services to Fortune 500 and Global 1000 companies that need to upgrade from old technologies to new ones.

In the last 20 years of experience with media conversion and data migration services, Data Strategies Int'l has developed highly efficient processes and tools to perform the migration of documents archived by most systems to newer document archive systems. We are vendor neutral and market our services, directly, through software vendors, hardware vendors, and system integrators.

The company's **off-line migration services** are unique in that they use technologies and processes that do not impact the client's day-to-day operation. Our off-line approach allows us to perform large-scale data migrations in the shortest time and the most cost effective way. The company's migration tools support most popular archiving products. We always provide our customers with comprehensive audit reports of the migration process. Moreover, we protect the data we process by adhering to strict security procedures, including chain-of-custody and, when needed, data encryption.

For **Document Archive migration**, we can process terabytes of data stored on optical platters, magnetic tapes or other storage media by most legacy archive systems and convert it to a format ready to be imported into the target archive. The conversion process could involve the extraction of millions of documents (Line-data, AFP, PCL, Metacode, TIFF Images, PDF, etc.) and associated metadata; the needed format conversion (e.g. Line-data or

TIFF to PDF); and the re-indexing of the contents.

Data Strategies is also a leading provider of **Check Image Archive migration** services, involving the migration of billions of check items from legacy archives to new check image archives. We cover all major vendors, including: Banctec, NCR, Carreker, ImageSoft, Unisys, Bisys, etc.

Data Strategies continuously expands its data migration capabilities by adding new products/formats to the list of document archives supported by the company's migration tools.

Data Strategies also provides a broad spectrum of **off-line Backup Data migration** services based on the same "non-invasive" technology and unique processes that characterize all our offerings. These services include: production of backup data catalogues from media created by legacy applications; restoring data from vintage backup tapes whose format or media type are no longer supported by customer's infrastructure; backup data consolidation using higher capacity media; data migration from a legacy backup format (product) to a new backup format (product).

Additional services introduced recently include **data migration for Mainframe Modernization** aimed at moving tape-based data to an open system deep archive or the cloud.

Document Migration Services

Document Images Migration

- Extraction from Legacy Systems
- Conversion to Target System
- Metadata/Indexing Conversion

Text Documents Migration

- Extraction from Legacy Systems
- Conversion to Target System
- Metadata/Indexing Conversion

Check Images Migration

- Extraction from Legacy Systems
- Conversion to Target System
- Metadata/Indexing Conversion

File Format Conversion

- Format Conversion (e.g. TIFF to PDF)
- Copybook Based Conversion
- Line Data to XML Conversion

Application Specific Conversion & Migration Services

Backup Tapes Conversion

- Media Conversion
- Catalogue Creation
- Backup Data Consolidation
- Backup Data Segregation
- Backup Application Conversion

Email Data Migration

- Media Conversion
- Application Conversion

PACS Data Migration

- Media Conversion
- Vendor Migration

VTS System Conversion

- Media Conversion
- VTS System Conversion
- VSM System Conversion

Data Transcription (Oil Industry)

- Seismic Field Data
- Seismic Processed Data
- Well-log Data

Data Archiving Services/Systems

Documents Archiving (Re-purposing)

- CD-ROM, DVD, Tape
- Cataloging, Indexing

Virtual Volume Deep Archive

- Archive Creation Service
- Archive Management System Licensing

Data Migration for Mainframe Modernization

Tape Data Migration

- TMS Data Base Analysis
- Datasets Migration & Conversion
- Data Volumes Migration (VTL)
- Migrated Archive DB Creation

Legacy Data in the Cloud

- Support via Micro Focus ECS

Tape Library Maintenance Services

Label & Initialization

- New Media Labeling and Initialization
- In-use Media Label Verification

Media Conversion

- Cloning & Duplication
- Volume Stacking
- Dataset Stacking (Selective)

Library Audit

- TMS Data Base Validation
- Media Aging Analysis
- Problem Media Detection
- Media Refreshing, Conversion Planning

Media Analysis

- Non-destructive Media Analysis
- Security Erasing & Degaussing
- Re-certification & QA Analysis

Data Recovery

- Data Recovery from Magnetic Tapes
- Data Recovery from Optical Platters
